

TELESCOPIC MULTIMEDIA DESK PDU

This Vertical In Desk Power Dock is a grommet style pop-up power and data unit, which is fitted into the desk. When not in use, almost all of the Power Dock is stowed below the desk surface, and when in use all you need to do is pull the unit up with the metal handles until it locks itself in position. Vertical grommet pulls up and out of the desktop to supply power and data needs from anywhere on a desk and is secured by an 80mm nut that screws up from under the desk. A red locking button secures the unit upright. The Power Dock is easy to install and retro-fittable, and the data cut-outs allow the customer to terminate their own data points. The GST18 connector gives the opportunity to customize your length of PowerData Start lead, or alternatively daisy chains the unit with a PowerData MPP Under desk Unit.

FEATURES:

- Aluminum in desktop pull up unit
